

Aafnai Patro UI Audit

The site is not yet behaving like आफ्नै पात्रो. The home page opens on the astronomy tool and still says Mero Patro. Most other pages either redirect to that tool or load blank. The calendar people come for sits more than 1,000 px down and shows no festivals. Fix routing and branding first. Then rebuild the home page around today's date, and gather personal tools into one आफ्नै ठाउँ.

Audited 1 Oct 2026, ~12:00 NPT Chrome · 1280 px desktop and 375 px phone emulation

SUMMARY

Fix these five first

1. **Stop redirecting 22 routes to `/astro/`.** This includes the TV, नोट, privacy and terms links.
2. **Un-blank the legacy pages.** `/convert`, `/jyotish/rashifa`, `/samachar` and every `/calendar/*` month are iframed from `/api/v1/compat/page`. Your own CSP blocks that iframe, and the endpoint loops on redirects.
3. **Make `/` a calendar-first home.** खगोलीय पात्रो moves to `/tools/astro`.
4. **Replace every "MeroPatro" string.** That covers titles, og:site_name, the manifest, the footer, back links and the H1.
5. **Group personal tools under `/me`** (आफ्नै ठाउँ). They are spread across three URL namespaces today.

PO · broken

P1 · hurts use

P2 · polish

Already working well

- ✓ Accurate tithi data with transition times (e.g. "१२:५१ देखि षष्ठी")
- ✓ Fast: 20 requests, ~370 KB, DOM ready in 1.65 s
- ✓ `lang="ne"`, a skip link, and every control has a name
- ✓ No horizontal scroll at 375 px
- ✓ Light/dark theme toggle and a PWA manifest

A · ROUTING & BROKEN PAGES

PO 22 public routes redirect to the astronomy page

Requesting these URLs returns a redirect to `/astro/` with the title "खगोलीय पात्रो · Astronomy Calendar · MeroPatro". Several are in the main nav, the bottom nav and the footer. Privacy and terms being unreachable can also block Google Sign-In verification.

`/about` `/explore` `/tools` `/tv` `/fm` `/my-diary` `/family` `/aaja` `/contact`
`/privacy` `/terms` `/sources` `/jyotish/china` `/tools/api` `/tools/card`
`/tools/diaspora` `/tools/family` `/tools/my-data` `/tools/preeti-converter`
`/tools/tithi` `/settings/holidays` `/settings/notifications`

Fix: remove the edge or server rule that sends these paths to `/astro/`. Make the SPA fallback serve the main app shell. See [_redirects](#).

PO Converter, rashifal, news and every month page render blank

These routes mount an iframe pointing at `/api/v1/compat/page?path=...`. The console shows two failures. CSP `frame-src https://accounts.google.com` blocks the frame, and the endpoint itself fails with `ERR_TOO_MANY_REDIRECTS`. The page title also falls back to a bare "MeroPatro". The 36 `/calendar/208x/xx` URLs in the sitemap are affected too.

Fix: port these pages into the app, which is the real fix. As a stopgap, allow `frame-src 'self'` and fix the redirect loop. See [_headers](#).

P1 Unknown URLs return 200 (soft 404)

`/nonexistent-xyz` returns HTTP 200 with the generic title "MeroPatro · नेपाली पात्रो". Search engines index these as thin duplicates, and visitors see no "page not found" message.

Fix: render a Nepali 404 page with search and links to पात्रो and उपकरण, and send status 404.

P2 Some tools live outside the app shell

`/tools/nepali-typing` redirects to `/nepali-typing/`, a separate app with its own CSS and header. `/samudaya` redirects off-site.

Fix: serve them at `/tools/...` inside the shared header and footer. Mark off-site links with ↗.

B · BRANDING

P0 "MeroPatro" is still the visible brand

Found in the home H1 ("खगोलीय पात्रो · Mero Patro"), every `<title>` suffix, `og:site_name`, the manifest `name` / `short_name`, the meta description lead, the footer brand link and "© २०२६ MeroPatro", the subpage back link "← MeroPatro", and the runtime title "MeroPatro · 1 October 2026". The header logo glyph is म, not आ. Mero Patro is also an established calendar brand in Nepal, so finishing the rename lowers the risk of confusion and trademark trouble.

Fix: use a single `BRAND` constant, the [title helper](#), the [head template](#) and the [manifest](#). Change the mark to आ. Run `grep -ri "mero ?patro"` across the repo, CMS and API responses before shipping.

P1 "आफ्नै" is used as a prefix 53 times on the home page

Every link and category gets it: आफ्नै आज, आफ्नै डेटा, आफ्नै Developers, and an "आफ्नै टुल्स" label on 9 cards. Used everywhere, it stops meaning anything. It also makes nav labels wrap onto two lines at 1280 px.

Fix: keep आफ्नै for the brand (आफ्नै पात्रो) and the personal hub (आफ्नै ठाउँ). Everything else uses a plain noun: राशिफल, उपकरण, समाचार.

C · HOME PAGE & INFORMATION ARCHITECTURE

P0 The home page is the astronomy instrument

The first screen reads "LIVING ASTRONOMICAL INSTRUMENT · NEPAL", then a giant H1 "खगोलीय पात्रो · Mero Patro", then the NASA picture title in English. Today's date appears as an English H2, "Nepali Date Today: 2083-06-15". The month calendar starts **1,183 px** down on desktop and **2,479 px** on a phone. The phone page is **11,632 px** tall, about 14 screens, mostly NASA layers (APOD, EPIC, Mars, NEOs, DONKI, exoplanets, tech transfer).

Fix: lead with today: BS date, tithi, the next festival and quick actions, then the month grid. Move all NASA layers to `/tools/astro`, with one teaser card on the home page at most. See the [Today](#) and [month grid](#) samples.

P1 The same links are repeated in six navigation systems

The page has a primary nav (6 items), a blue reference bar (7), a quick-launch block (4), the "थप" mega menu (10), a features grid (19) and a mobile bottom nav (5). राशिफल appears in nearly all of them. The reference bar repeats the date already shown in the hero.

Fix: keep one primary nav (पात्रो · राशिफल · मिति रूपान्तरण · उपकरण · थप ▾) plus the आफ्नै ठाउँ button. Drop the reference bar. Replace the features grid with the [tools index](#).

P1 Personal tools are scattered across three namespaces

The personal tools live at `/my-diary`, `/notes`, `/planner`, `/tools/family`, `/tools/my-data`, `/tools/card`, `/tools/tithi`, `/settings/holidays` and `/settings/notifications`. They are labelled "आफ्नै दुल्स" next to public tools like the converter. The nav item "आफ्नै नोट" opens `/my-diary`, which currently redirects to astro.

Fix: create one signed-in hub, आफ्नै ठाउँ at `/me`, with three groups: लेखन, परिवार र सम्झना, सेटिङ. See the [hub sample](#) and the [redirect map](#).

P2 Developer status is shown to visitors

The hero shows an "Edge online" pill and a "Cosmic Context" line in 10 px grey ("0 NEOs within 0.05 AU"). Neither helps someone checking today's tithi.

Fix: remove both from the UI. Keep the status in logs or behind a `?debug` flag.

P1 No festivals or public holidays in the grid

Asoj 25 (11 Oct), Ghatasthapana and the start of Dashain, appears only as "प्रतिपदा". Saturdays and holidays are not red. Festivals and holidays are the main reason people open a Nepali patro.

Fix: add a festival label in each cell and red numerals for Saturdays and holidays, with a legend. Show the next festival with a countdown at the top.

P1 The month heading doesn't match the grid

The heading says "October 2026", but cells lead with BS numerals. The grid runs Asoj 11 to Kartik 21 with no month names, and every cell repeats "AD" ("27 AD", "28 AD", ...).

Fix: the BS month is the unit: "असोज २०८३", with "सेप्टेम्बर-अक्टोबर २०२६" as a subtitle. Show the AD day as a small number with no "AD" label. Mute days outside the month or leave them empty.

P2 Too much in each cell on phones

At 375 px each cell is 45 px wide and holds the BS day, AD day, a weather emoji, a temperature, the tithi and its transition time.

Fix: on phones show the BS day, a small AD day and a holiday dot. Show tithi and festival details in a sheet when a day is tapped. Move weather to the Today card.

P1 37 font sizes, with 235 text elements under 10 px

The home page uses sizes from 7.68 px to 76.8 px, including 8.32, 8.64, 8.96, 9.44 and 9.92 px. Devanagari needs more size than Latin because matras and conjuncts carry meaning, so at 9 px tithi names blur. The page also loads three families (Anek Devanagari, Eczar, Inter), and the H1 has a heavy text-shadow.

Fix: use a 7-step scale (13 / 15 / 17 / 20 / 26 / 34 / 48 px) with 13 px as the floor, and two families: Mukta for UI and Noto Serif Devanagari for dates and headings. See the [tokens](#).

P1 Nepali and English are mixed in the same view

English-only controls include Today, Ambient, Stand under this sky, Cosmic Card, Time Travel, Exact date, Selected Earth date and Previous day. Dates appear in three formats: "2083-06-15", "NS 1146 Yanlā ga Nyāmilā" and Devanagari numerals in the grid.

Fix: make Nepali complete in `ne` and move English to the EN toggle. Use one date format per locale: "१५ असोज २०८३, बिहीबार".

F-G · MOBILE & ACCESSIBILITY

P1 Bottom nav has the wrong items and tiny labels

The tabs are पात्रो, लाइभ टिभी, रूपान्तरण, नोट and थप, with 11.2 px labels in 73 px slots, and "आफ्नै लाइभ टिभी" crowds its neighbours. TV and नोट currently redirect to astro. राशिफल, one of the most used features, is missing.

Fix: use पात्रो · राशिफल · रूपान्तरण · आफ्नै ठाउँ · थप with 13 px labels and 52 px targets. See the [tab bar sample](#).

P1 NASA text renders as raw HTML

The APOD panel shows "Explanation: ... " as literal text, in light grey on a grey panel, and it scrolls for several screens on a phone.

Fix: sanitize and render it as HTML with [this snippet](#), then clamp it to 4 lines with a "थप पढ्नुहोस्" toggle. It belongs on `/tools/astro` anyway.

P2 Smaller accessibility gaps

The APOD image has `alt=""` even though it carries content. There is an empty `<h3>`. 18 controls are under 32 px. Weather is shown only as emoji. The reference bar hides समाचार, रेडियो and TV off-screen with no scroll cue. Grey text on translucent glass panels has visibly low contrast.

Fix: use the APOD title as alt text, remove empty headings, give targets 44 px, give each weather emoji a text label, use solid card backgrounds, and aim for 4.5:1 contrast on body text.

P1 Analytics are blocked by your own CSP

The Cloudflare Web Analytics beacon is refused on every page because `script-src` doesn't list `static.cloudflareinsights.com`. Traffic numbers are probably near zero.

Fix: add the beacon host to `script-src` and `cloudflareinsights.com` to `connect-src`.

P2 Share previews and titles are inconsistent

`og:image` is an SVG, which Facebook, WhatsApp and X don't render. The site uses three title patterns: "X · MeroPatro", "MeroPatro · नेपाली पात्रो" and "MeroPatro · 1 October 2026". The month description says "महिना 06" instead of "असोज".

Fix: use a 1200×630 PNG, the pattern "पृष्ठ · आफ्नै पात्रो" and month names in meta. Prerender each route's head so crawlers don't all see the astro head.

P2 Manifest and asset paths point at old or astro routes

The manifest shortcuts use `/rashifa/aries/aaja` and `/my-diary`, while the nav uses `/jyotish/rashifa`. The favicon and the main JS/CSS bundle load from `/astro/assets/`, which shows the whole site is running inside the astro app.

Fix: build the main app to `/assets/`, serve the favicon from the root, and update the shortcuts. See the [manifest](#).

EVIDENCE

What visitors see today

Desktop, first screen: astronomy hero, "Mero Patro" H1, "Edge online" pill, two nav rows.

Month grid: tiny grey text, weather in every cell, no festivals, Saturdays not red.

arditwilight, while ash and gas from [Mount Etna](https://science.nasa.gov/earth/earth-observatory/the-continuing-eruption-of-mt-etna-1614/) are seen higher in the background. The pink band lower in the sky is called the [Belt of Venus](https://science.nasa.gov/image-article/apod/apod-2025-august-1-buck-moon-and-belt-of-venus/). During a full moon, the Moon and the [Sun](https://science.nasa.gov/sun/) are in opposition in the sky: the moon rises as the sun sets. The [lunar phase cycle](https://co.global.spacebook/sky/moon-phases/) lasts approximately

APOD description printed as raw HTML.

SAMPLE HTML

Drop-in components

Each sample is plain HTML and CSS with no framework. Components use container queries, so they adapt to the space they're placed in. Use the Phone toggle to see the 375 px layout. All samples share the tokens below. Calendar values for Asoj 11–31 match the live site; Asoj 1–10 tithis, sunrise and the reminders are illustrative.
